

Wheel Bearing unit

- Wheel bearing and flange that fits in with our outer drive shaft Joint “Unic” (see driveshafts).
- This bearing unit in combination with a high strength aluminium upright makes a package in “WRC level” in terms of weight and stability but with more mileage between service.
 - The unit is compact which means longer drive shaft’s and therefore less joint angles.
 - It has magnetic inserts for speed sensor.
 - The flange has 5 pcs. M14x1,5 thread holes at diam. 112mm.
 - The optional guide sleeve facilitates the mounting of the wheel (light colored in the photo).
