

Drive Shaft

Drive shaft for rigid axle (Volvo fit) in both length's (Volvo 240 and 740/940).

- The spline-axle is larger then Volvo original and therefore the diff must be suited for this spline.
- Two different bolt pattern – Volvo original (5x Ø16 PCD 108) and 5x M14x1.5 PCD 108.
- The bearing is special grinded to eliminate the axial play which otherwise makes the brake pedal inconsistent.
- The flange end is hollow drilled for weight loss.
